# Linux Path part 1

This terminal teaches the importance of the PATH environment variable. If two executables have the same file name, the one that comes earlier in the PATH is the one that will be executed.

The terminal is in Hermey Hall, next to SugarPlum Mary. If you want to access the terminal directly without playing the game, go to
https://docker2019.kringlecon.com/?challenge=path&id=b71371d8-7278-4649-9f0d-da25d95d479f

Note that all the commands you need are listed in green on the terminal.

Question 1

1) List the commands needed to win the challenge.

2) What is the difference between the commands `which`, `locate`, and `find`?

3) How do you view the contents of the PATH variable?
